

Algorithm testIsomorph(tree Node n, tree Node m)

input two tree node

output Prints true if the two trees rooted at the Nodes n and m are isomorph

```
if ( n.getRightChild.getValue = m.getRightChild.getValue ) &&  
if ( n.getLeftChild.getValue = m.getLeftChild.getValue ) {  
then if( ! testIsomorph(n.getRightChild , m.getRightChild) ) ||  
if( ! testIsomorph(n.getLeftChild , m.getLeftChild) )  
return false  
}
```

```
else if ( n.getLeftChild.getValue = m.getRightChild.getValue ) &&  
if( n.getRightChild.getValue = m.getLeftChild.getValue ) {  
then if( ! testIsomorph(n.getLeftChild , m.getRightChild) ) ||  
if( ! testIsomorph(n.getRightChild , m.getLeftChild) )  
return false  
}
```

else return false

return true
